DATAMYTE™

EnGagePLUS!

A single point of storage gage management software that ensures the safety of your critical gage and tool information.

Intuitive Gage Management

Maintain all gage information electronically, such as gage history and calibration records. Intuitive functionality includes colorful graphics, menus, and a floating tool bar for instant access to major functions.

- Electronically manage gage and tool information
- Guide and track necessary tool crib activities
- Create reports related to gage lab activities

Gage Specific and Customizable Reports

- Gages due for calibration or gage studies (multiple identifiers available: gage ID, department, manufacturer, or due date)
- Gage summary, event history, reports
- Overdue gage listing
- Out of tolerance listing
- Certificate of calibration reports
- Gage location
- Last gage report

Built-In Gage Studies

EnGagePlus! has built-in capability to perform a variety of gage studies, including Gage R&R, bias and linearity. The user has the option of performing either standard or ANOVA R&R studies. EnGagePlus! automatically maintains all study events as part of each gage history, and is compliant with the MSA 3rd Edition Gage R&R and ANOVA analyses.

Kitting Module (optional)

The EnGagePlus! Kitting Module, when used in conjunction with EnGagePlus! can aid users by allowing them to group together gage types that are needed to measure specific parts.

DRILCO

Calibration Functions

A wide variety of calibration functions are part of the standard EnGagePlus! solution.

- Unlimited input of traceable numbers > Manual entry option for pass, fail, limited use
- Unlimited test points per gage
- Capability for final readings
- Automatic reading of RS-232 gages
- Calibration sticker printing
- Ability to add descriptive attributes
- Variety of calibration frequency options.
- Computations performed as part of data entry

Gage Lab Functions

Fulfill all required gage lab tasks:

- Online calibration procedures, including text, and pictures
- Detailed gage events history
- Capability to print calibration labels
- Corrective action and training tracking modules
- Extensive standard reports with custom report capability – with web browser view
- Plant calendar setup to accumulate calibration time based on your schedule
- Files saved with gages to keep external calibration records, e.g., calibration certificates
- Paperless transfer of gage information and calibration certificates
- Keystroke saving features such as gage cloning, Quick Events and cylindrical gage module
- Multiple, customizable security levels
- Store pictures with gages

Database Support

Databases include Microsoft SQL Server and SQL Server Express. This multiple database compatibility allows gage lab personnel to concentrate on gage - related tasks. If location does not have SQL Server a Microsoft SQL Server Express is provided.

Key Reasons to Implement EnGage Plus!

- ✓ Quick retrieval of gage information and calibration certificates
- ✓ Schedule gage certification notification to ensure compliance
- ✓ Reduce errors from manual documentation and audit issues
- ✓ Single source for all gage history with intuitive quick search
