Norbar Torque Tools Ltd

# Welcome to NORBAR

John Reynertson  
Managing Director  
Norbar Torque Tools

“From our humble beginnings over 80 years ago in a small workshop in North Bar, to our latest purpose-built factory on Wildmere Road, Norbar has pioneered many of today’s solutions for torque control. Our offices around the world are excellent at taking core Banbury product and developing it for your use in your application. From manual torque wrenches to sophisticated control systems, we are still dedicated to being the best at what we do.

Norbar is now a member of the Snap-on Incorporated family of companies and is proud to be part of a business which has beliefs, values and a vision closely aligned with those that Norbar was founded on. We still strive to be "The best torque tool company in the world. Respected, profitable and a great place to work."

We have extended our product range this year by the addition of FASTORQ products and Sturtevant Richmond industrial tools to our group of highly respected professional brands. These companies expand our reach into connected manufacturing and bespoke engineered to order torque and tensioning products, enhancing our market leadership in these exciting, growing areas. ”

FASTORQ is a preferred global provider of precision bolt loading and removal solutions. FASTORQ is a pioneer of the hydraulic tools industry and today designs, manufactures and sells an innovative line of bolting solutions including a complete line of hydraulic, electric and pneumatic tools, as well as design resources to customise existing tools or create one-of-a-kind bolting solutions.

From torque wrenches to torque screwdrivers, interchangeable heads for torque wrenches and the first torque analyzers and calibration instruments, Paul Sturtevant and Frank Livermont led the way. Sturtevant Richmond continues to shape the industry with game-changing innovation including the development of radio-equipped torque hand tools that connect to a process monitor.

Electronic Tools

EvoTorque® are electronic torque tools designed for applying torque to threaded fasteners. The unique ‘Intelligent Joint Sensing’ technology will accurately tighten to the correct torque without the risk of excess overshoot or undershoot that is common in other electric tools.

Pneumatic Tools

PneuTorques consist of a robust air motor driving a Norbar multiplier with three or more stages of epicyclic gearing. This gives the advantage of smooth, continuous rotation (versus an impulsing action or the hammer action in an impacting tool).

## EVOTORQUE® BATTERY TOOL (EBT)

The EvoTorque® Battery Tool (EBT) features a new brushless motor, data memory and data transfer capabilities. Norbar has combined this with our respected gearboxes to deliver a range of fast, reliable, accurate torque tools that retain key features from our EvoTorque® 2 range (see page 51).

**Fast:** EBT uses a powerful motor coupled with either a single speed or auto two speed gearbox for rapid joint completion times.

**Durable:** The industrial motor used by the EBT gives long life with minimal motor service requirement.

**Accurate:** EBT is a transducer-controlled battery powered torque tool designed for accurately applying torque to threaded fasteners. The unique 'intelligent joint sensing' technology continually measures the joint during tightening and when necessary, employs dynamic braking to avoid torque over-shoot due to motor inertia. Both accuracy and repeatability of  $\pm 3\%$  of the setting within the calibrated range.

- Tool is not constrained by power cable or hose, improving safety, convenience and versatility
- 18V, 5.0Ah battery and efficient motor give outstanding fastening performance per charge
- 'Safe to start' button ensures hands are safely positioned at start up

Note: In some circumstances it can be difficult to support and operate the tool while simultaneously pressing the trigger and 'safe to start' button. For this reason, single trigger models are also available.

- OLED display ensures visibility in all conditions
- High powered LED to illuminate application
- Optional 'Ease of Use' functionality when in 'Torque Only' mode, minimising operator error
- Optional 'Relax Mode' feature automatically reverses tool following joint completion until the tool becomes free or the trigger is released, minimising the chance of fastener and reaction 'locking' in place
- Supplied with a traceable calibration certificate for torque and angle as standard. Calibrated ranges shown in the table on page 50, clockwise only
- Available in single speed ideal for torque with angle control
- Auto two speed configurations available for rapid joint completion
- Torque, Torque & Angle and Torque Audit modes available
- In Torque & Angle Mode and Audit Mode, torque can be set from a lower percentage of tool maximum on single speed tools compared to their auto two speed equivalents. Single speed tools are therefore recommended for angle operation
- Software can be updated remotely, without the need to return the product to Norbar
- Quiet : Noise level : 79.1dB(A), with an uncertainty  $K = 3\text{dB}$ , when free-running
- Vibration : Does not exceed  $2.5\text{m/s}^2$  (highest measured under test :  $0.9\text{m/s}^2$ )

Tool Weight (kg)*	3.7	5.7	5.9	4.9	5.9	6.8	7.9	8.3
Reaction Weight (kg)	0.8	1.4	1.4	1.1	1.4	1.4	2.5	2.5

NOTE: Kit versions come with tool, 2 batteries, charger and a secondary handle in a carry case. 800 N·m tools do not come with a secondary handle.

*Bare tools are also available, please visit [www.norbar.com](http://www.norbar.com) for more information.*

Bare tools are supplied in a cardboard box without batteries, charger and secondary handle. Other tool variations are available, please contact Norbar for details.

NOTE: When the tool is to be used for untightening bolts; Norbar recommends the selection of single speed versions. In the case of prevailing torque lock-nuts or partially tightening bolts, the Auto Two Speed version of the tools will generally give no advantage and single speed tools should be selected.

\* Tool weight excludes both reaction and battery. The battery weighs 0.8 kg.

Tool ranges shown above are calibrated ranges, see table above line drawing for operating ranges.

## EVOTORQUE®2

The EvoTorque®2 is an electronic torque tool designed to accurately apply torque to threaded fasteners. Tools are factory calibrated to  $\pm 3\%$  of reading. The unique 'intelligent joint sensing' technology continually measures the joint during tightening and when necessary, employs dynamic braking to avoid torque over-shoot due to motor inertia. Consequently, EvoTorque®2 can apply torque accurately over a wide range of joint rates from hard (high torque rate) through to soft (low torque rate). All EvoTorque®2 tools are highly tolerant of supply voltage and frequency variation. If the supply voltage is outside of tolerance then, as a safety feature, the tool will be prevented from starting.

The EvoTorque®2 has the ability to memorise multiple targets, work IDs, user IDs and readings. A work sequence (flow) can be performed on the EvoTorque®2, taking the user through a pre-defined tightening sequence. The tool has four modes of operation: Torque, Torque & Angle, Torque & Angle with Final Torque and Torque Audit. The unique Audit Mode is a sophisticated feature for testing pre-tightened bolts with minimal impact on the original fastening torque and can provide quality control data for monitoring joint performance over time. With accuracy and repeatability of  $\pm 3\%$  of the setting, EvoTorque®2 offers many features including:

- Multiple units of torque measurement, N·m, lbf·ft, ft·lb and kgf·m
- Calibrated from 20% to 100% of tool range
- Torque, Torque & Angle and Torque Audit modes available
- Display and on-board storage of final torque or torque and angle values
- Memory capacity for 3,000 readings, time and date stamped
- USB and Bluetooth® 4.0 data transfer (also called Bluetooth® Smart)
- Complementary PC software 'EvoLog' for data management and tool configuration
- 12 user IDs can be downloaded to the tool and results can be stored against individual users
- Results can be output in CSV (comma-separated values) format for users not able to use EvoLog
- 'Usage' counter gives the ability to see the amount of times the tool has been used since the last reset
- 'Turn Angle' option can be used to check if bolts have already been tightened in an assembly process
- Supplied with a traceable calibration certificate for torque and angle as standard. Calibrated from 20% to 100% of tools maximum torque capacity, clockwise only

## PNEUMATIC TORQUE TOOLS

### What is a PneuTorque® Pneumatic Torque Tool?

The PneuTorque® consists of a robust air motor driving a Norbar multiplier with three or more stages of epicyclic gearing.

Torque control is achieved through adjustment of the air pressure. An air pressure versus torque graph and a calibration certificate is supplied with each tool and allows specific torque values to be set. For more critical applications, PneuTorques can be fitted with a torque transducer and the precise torque output displayed. The tool can then be shut off at the desired torque either manually or automatically using suitable control circuitry.

### Why use PneuTorque® Pneumatic Torque Tools?

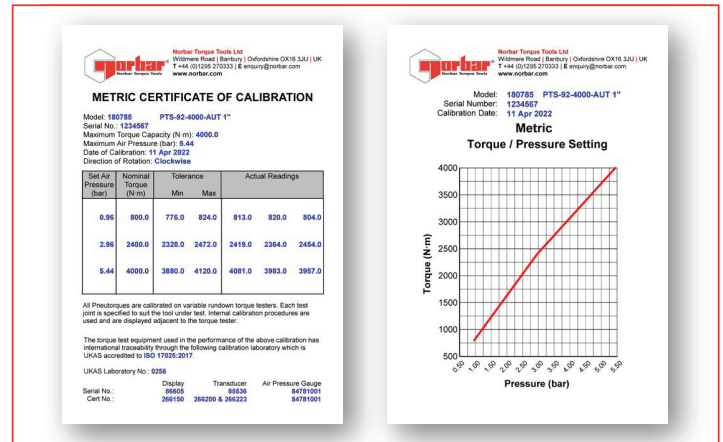

Hand operated torque multipliers are ideal for low volume or intermittent use or when there is no power source available. However, for production lines or whenever a large number of bolts is involved, a powered multiplier will save a considerable amount of time.

PneuTorque® operation is quiet – less than 84 dB(A) with absolutely no impacting. These two factors make PneuTorques comfortable for the operator to use, reducing fatigue and consequently increasing safety.

PneuTorques provide accurate torque control – on a given joint they will stall repeatably to within  $\pm 5\%$  (PTS tools,  $\pm 3\%$ ). Using electronic shut off, this repeatability can be improved to  $\pm 2\%$ .

### Summary of PneuTorque® Advantages:

- Sound pressure level does not exceed 84 dB(A) with an uncertainty  $K = 3$ db
- No impacting means less damage to the tool, socket and bolted assembly
- Less operator fatigue, results in increased safety
- Powerful – models available up to 300,000 N·m (220,000 lbf·ft)
- Repeatability of  $\pm 5\%$  for accurate torque control ( $\pm 3\%$  for PTS range)
- A wide range of attachments and accessories make PneuTorques adaptable to many applications

## PNEUMATIC TORQUE TOOLS

**PneuTorque® Applications**

The smooth and continuous torque output of the PneuTorque® makes these tools suitable for a wide range of bolting and non-bolting applications.

**Bolting**

PneuTorques are ideally suited to tightening and untightening bolts of up to 150 mm diameter. The following is just a small selection of applications:

- Wheel nuts on trucks, buses and large machinery
- Structural steelwork
- High pressure joints e.g. Pipelines, boiler feed pumps and pressure vessels
- Engine head bolts
- Injector heads on plastic injection moulding machines
- Heat exchangers
- Heavy vehicle production eg. chassis and suspension bolts

**Non-bolting**

Whenever a high continuous torque is needed, PneuTorques can be used as the power source. Typical applications include:

- Valve Actuation and valve grinding
- Powering wagons and gantries
- Barring of large diesel engines (turning the crankshaft) during build
- Weld testing by applying test torques
- Roller adjustment in steel mills and paper mills
- Valving of gas bottles

## PNEUTORQUE® PTS™ SERIES

The PTS™ is the result of an extensive design project to produce an efficient air motor in an accurate torque tool. The air motor is then married to Norbar's respected gearbox range, sharing common torque reaction accessories with PTM, EvoTorque® 2 and EBT.

- Pistol grip handle for operator comfort
- Designed to offer excellent power-to-weight ratio
- Easily accessible switch for forward and reverse operation
- $\pm 3\%$  repeatability of reading from 20% to 100% of range
- Air coupling designed for safety and rapid operation
- Quiet operation - The sound pressure level is 77 dB(A) [the PTS™ 4000 is 79 dB(A)]. Uncertainty  $K = 3$  dB
- Directional exhaust barrel directs exhaust away from operator
- Replaceable square drive
- Fast operation for rapid bolt rundown.
- Non-impacting - exceptionally low vibration levels ( $0.343 \text{ m/s}^2$ ), make these tools comfortable and safe for operator use
- Steel reactions supplied as standard. Bespoke reactions available upon request

When the tool is to be used for untightening bolts, Norbar recommends the selection of single speed versions. In the case of prevailing torque lock-nuts or partially tightening bolts, the Auto Two Speed version of the tools will generally give no advantage and single speed tools should be selected.

## PNEUTORQUE® PTS™ REMOTE SERIES

Remote control versions have no direction control on the tool but rely on external pneumatic circuitry to provide this function. This opens up numerous application possibilities for the PneuTorque® ranging from simple stall shut-off in a hazardous working environment to sophisticated, multi-spindle torque and angle shut-off systems.

- Designed to offer excellent power-to-weight ratio
- ±3% repeatability of reading from 20% to 100% of range
- Replaceable square drive

NOTE: For full versatility, PTS™ Remotes are supplied without reaction see pages 63 - 66 for options or discuss bespoke engineered options with Norbar.

## ET, ET2, PTS™ AND PTM NOSE EXTENSIONS

Special nose extension reaction devices are available for use in situations where the tool access is restricted. A typical application is the rear wheel nuts on heavy vehicles.

### PNEUTORQUE® STANDARD SERIES

*From left to right PT 5 Remote, PT 5 Single Speed, PT 5 Automatic Two Speed and PT 5 Manual Two Speed*

Based on the original PneuTorque®, the 'Standard Series' range is a direct result of over 50 years of refinement and development necessary to keep pace with the requirements of industry today.

In use in many thousands of applications worldwide PneuTorque® wrenches continue to represent the foundation of Norbar's powered tool range. Two speed models offer all the advantages of single speed versions but with the additional benefit of a run-down speed five times greater than the high torque speed setting.

- Models available for almost every bolting and torque application, up to 300,000 N·m.  
Models above 6,000 N·m are Manufactured to Order, for more information please contact Norbar
- Forward and reverse operation
- Quiet : Noise level : 81dB(A), with an uncertainty K = 3dB, when free running
- Vibration : Does not exceed 2.5m/s<sup>2</sup> (highest measured under test: 0.444m/s<sup>2</sup>)
- Stall control gives repeatability of ±5% on a given joint
- Other reaction styles can be designed to suit specific applications
- Electronic torque transducers can be fitted for precise torque monitoring

16097.AUT	PT 1A 1" sq. dr., Auto 2SP 400 - 1,200 N·m, 295 - 900 lbf-ft
16013.AUT	PT 2 1" sq. dr., Auto 2SP 700 - 1,700 N·m, 516 - 1,250 lbf-ft
16015.AUT	PT 5 1" sq. dr., Auto 2SP 880 - 3,400 N·m, 650 - 2,500 lbf-ft
16017.AUT	PT 6 1½" sq. dr., Auto 2SP 880 - 3,400 N·m, 650 - 2,500 lbf-ft
16066.AUT	PT 7 1½" sq. dr., Auto 2SP 2,200 - 6,000 N·m, 1,622 - 4,500 lbf-ft
16072.AUT	PT 9 1½" sq. dr., Auto 2SP 2,100 - 9,500 N·m, 2,286 - 7,000 lbf-ft

MTS = Manual Two Speed. Auto 2SP = Automatic Two Speed.

Angle Encoders are available for Standard Series PTs please contact Norbar for further details.

NB: PneuTorque® PT 11 - PT 18 are supplied with a Lubro Control Unit as standard equipment. PneuTorques PT 12, 13 and 14 are also supplied with a weld prepared reaction ring as standard. PT 13 and 14 are also supplied with a transporting trolley. PT 15 - 18 do not include output drive or reaction. These components will be engineered uniquely for each application. Remote PT part numbers are designated with an .X

e.g. PT 1 Remote is 16031.X

e.g. PT 1 Remote Auto is 16031.XAUT

For remote models, consult Norbar for prices.

## TORQUE REACTION

This page applies to both HandTorque® multipliers and powered torque tools

### Principles of Torque Reaction

Newton's law dictates that for every applied force there is an equal and opposite reactive force. For applications requiring relatively low torques that can be applied with a torque wrench, this does not present a problem as the reactive force is absorbed by the operator. However, if the desired torque necessitates the use of a multiplier, the resultant reactive force can only be absorbed using an appropriate reaction device.

For this reason all Norbar multipliers are supplied with a reaction plate or reaction foot fitted as standard.

All of the standard reaction plates and feet supplied with standard Norbar tools have been designed to enable the multiplier's use in a variety of environments. However, due to an infinite number of bolting arrangements, it is impossible to have one reaction device that will satisfy every customer's requirement. See pages 65 to 66 for when the supplied standard reaction is not suitable.

*In the above example, 1,000 N-m torque output will result in a reactive force of 6,667 N at a point 0.15 m from the axis of rotation or 2,000 N at 0.5 m.*

### Avoiding Torque Reaction Problems

It has already been mentioned that the reaction force is equal to the force being applied. However, the magnitude of the reaction force is dependent upon the perpendicular distance between the point of reaction and the centre line of the multiplier, i.e. the greater the distance the lower the force.

For this reason the point of reaction should be kept as far away from the centre line of the gearbox as is practical.

Customers using or modifying reaction plates for Standard Series multipliers up to a capacity of 3,400 N-m should note that if the reaction is taken on the radiused part, the reaction force is perpendicular to the tangent of the curve. Consequently, the further around the radius the reaction is taken, the smaller the perpendicular distance and therefore the greater the force.

Although a longer reaction plate may mean lower forces, the bending moment close to the multiplier will increase.

Customers extending the length of Norbar's standard reaction plates should be aware that an increase in overall length will result in a larger induced bending stress and should not assume that because the reaction plate is strong enough at one length it will remain so when extended.

Excessive side loading, resulting from poor reaction, increases frictional forces inside the multiplier. This can lead to lower multiplication ratios (outside  $\pm 4\%$ ).

The ideal reaction arrangement has the centre of the reaction bar and the centre of the nut on a perpendicular line to the centre line of the tool.

## TORQUE REACTION

This page applies to both HandTorque® multipliers and powered torque tools

*Signs of poor reaction are evident on this damaged foot. Reaction was taken at the wrong point on the foot and burring indicates that the foot was slipping off the reaction point.*

### Points to remember

- Take the reaction as far away from the multiplier as practical
- Ensure that the reaction point remains square to the multiplier wherever possible as this will minimise any additional stress in the output square, which could result in premature failure. If the multiplier tilts under load, the reaction may not be square
- For applications that do not allow the reaction to be taken securely it is advisable to use a double-sided or balanced reaction plate

### Reaction Force

When using multipliers and PneuTorques the reaction point must be capable of withstanding the reaction force. Therefore, great care must be exercised where the reaction is taken when applying high torques to studs and bolts.

By using the following formula you can calculate the force at the point of reaction. The greater the distance the lower the force.

D = Stud Diameter

$$\text{Formula to calculate Area of Stud} = \frac{\pi \times D^2}{4}$$

$$\text{Formula to calculate shear force: Shear Force} = \frac{\text{Reaction Force}}{\text{Area of Stud}}$$

### What to do if the standard reaction device is not suitable

For those applications that do not permit the use of a standard reaction plate the customer has three options.

- Norbar or an authorised Norbar distributor will design and manufacture a special purpose reaction plate to the customer's requirements
- The customer can modify the standard reaction plate to suit their requirements
- The customer can fabricate their own reaction device after liaison with Norbar's technical department or a Norbar distributor

Customers wishing to either modify the original reaction plate or fabricate their own device should read the above information on how to avoid common torque reaction problems.

## TORQUE REACTION

A variety of reaction plates, manufactured in Steel or Aluminium for HandTorque®, EvoTorque®, EvoTorque® Battery Tool and PneuTorque®. Norbar also offer a range of specific reactions for the Wind Energy Generation Industry.

### PTS™ AND PTM DUAL TRIGGER MODULE (DTM)

*Dual Trigger Module  
(19286)*

A secondary trigger for use with all PTS and PTM tools that easily attaches between the tool's air inlet port and hose. This requires the operator to use both hands to run the tool and so reduces the risk of hands getting trapped between the reaction bar and reaction point.

- Inlet ½" BSPP Female
- Outlet ½" BSPP Male

11	DUAL TRIGGER MODULE
19286	Dual Trigger Module for use with any PneuTorque

To order a pre-assembled tool add the suffix .DTM onto the end of the part number.

NOTE: When fitting a DTM the torque tool must be recalibrated with the DTM in place, contact Norbar for details.

### SECONDARY HANDLE

The secondary handle is an easy to fit and versatile accessory which offers additional support and ease of handling when applying torque with Norbar's powered tools. The secondary handle is designed to fit directly to all new powered tools which have a handle location groove in the annulus which is covered by a red rubber band (see inset image to the right).

11	SECONDARY HANDLE
19363	For use with ET2/EBT/PTS/PTM 72, 92 & 119 Series
19448	For use with ET2/EBT/PTS/PTM 80 Series
Not suitable for use with ET2/EBT/PTS/PTM 52 and 68 Series	

### RIGHT ANGLE GEARBOX MODULE

*Right Angle Gearbox  
(180280)*

The Right Angle Gearbox Adaptor will provide most ET, EBT, PTS™ and PTM tools with a 90° angle of operation, enabling the benefits of Norbar's pneumatic and electric torque tools to be brought to a host of applications from which they are currently excluded due to space restrictions.

- The tool handle can rotate 360° in relation to the Right Angle Gearbox allowing the most comfortable and safest position to be found
- The Right Angle Gearbox can be purchased as a stand-alone product and retrofitted to existing Norbar tools by suitably qualified technicians. Norbar recommend tool recalibration after a Right Angle Gearbox has been fitted but where this is not possible, an efficiency of 97% can be assumed.

11	RIGHT ANGLE GEARBOX
180280	Right Angle Gearbox Module

## RIGHT ANGLE GEARBOX MODULE

To order a pre-assembled ET2 or PTS tool add the suffix .RA onto the end of the part number. Part numbers for a pre-assembled EBT can be found on page 50.

The EvoTorque®2 can also be supplied in a Peli Case pre-assembled to a Right Angle Gearbox at an additional charge. Please add .RAPEL onto the end of the EvoTorque®2 part number.

The EvoTorque®2 Right Angle Gearbox is supplied in a cardboard box as standard, if a sturdier case is required Norbar can provide a Peli Case at an additional charge. Please add .PEL on to the end of the part number when ordering.

## NOTE:

Kit versions come with tool, 2 batteries, charger and a secondary handle in a carry case. Bare tools are supplied in a cardboard box without batteries, charger and secondary handle.

*Right Angle Gearbox fitted to EvoTorque®2*

## LUBRO CONTROL UNITS

### Lubro Control Unit, part numbers 16074

Norbar's standard filter, regulator, lubricator unit 16074 features a 100 mm diameter gauge for easy and accurate setting of air pressure with ergonomic placement of air pressure adjustment control. Supplied with 3 metres of robust, steel braided air hose with fittings to connect to PneuTorque® wrenches.

### Twin Regulator Lubro Control Unit, part number 16075

The 'Twin Lubro' has the same features as Norbar's standard filter, regulator, lubricator unit but has the benefit of two regulators and a switch that allows quick selection between two air pressure settings. A typical application for this would be a PneuTorque® user wishing to quickly select between two applications requiring different torque settings. For example, this might be controlled torque in the forward direction and maximum torque allowed by the tool in the reverse direction.

16074

16075

11	LUBRO CONTROL UNITS
16074	Lubro Control Unit with 3 m hose
60339	MPa only gauged Lubro Control Unit with 3 m hose
16075	Twin Lubro Control Unit with 3 m hose

See page 127 for Lubro Control Unit spares.

## SOCKET RETAINERS

These socket retaining clips make attaching sockets to square drives easy and quick.

8	SOCKET RETAINING CLIPS
19556	Socket Retaining Clip for 3/4" sq. dr. (Yellow) - Pack of 10
19557	Socket Retaining Clip for 1" sq. dr. (Red) - Pack of 10
19558	Socket Retaining Clip for 1 1/2" sq. dr. (Green) - Pack of 10
19559	Socket Retaining Clip for 2 1/2" sq. dr. (Blue) - Pack of 10

This product is intended for general purpose use at ground level. It is not intended as a solution for socket retention when working at height or where FOD (foreign object damage) could cause a safety and/or commercial risk.

Not recommended for use with impact tools.

CONNECTED TOOLS

EBT for use with G400 and G400MP ..... 71

Torque Controller System Global 400 Series ..... 72

Multi-Port Torque Controller System Global 400MP Series ..... 72

These systems are designed to error proof processes where highly customised products are assembled. When combined with the EBT customers can ensure correct torque has been achieved at key critical bolting steps of their processes monitored by the Global 400 or Global 400MP.

## EBT FOR USE WITH G400 AND G400MP

Norbar's highly accurate transducer controlled EBT battery powered torque tool perfectly complements and connects with Sturtevant Richmond's Global 400 series Torque Controller systems via Xbee radio. These systems are designed to error-proof processes where highly customised products are assembled. When combined with the EBT customers can ensure correct torque has been achieved at key critical bolting steps of their processes monitored by the Global 400 or Global 400MP.

EBT is a transducer controlled battery powered torque tool designed for accurately applying torque to threaded fasteners. The unique 'intelligent joint sensing' technology continually measures the joint during tightening and when necessary, employs dynamic braking to avoid torque over-shoot due to motor inertia. Both accuracy and repeatability of  $\pm 3\%$  of the setting within the calibrated range.

- Powerful motor coupled with either a single speed or auto two speed gearbox for rapid joint completion times
- Tool is not constrained by power cable or hose, improving safety, convenience and versatility
- OLED display ensures visibility in all conditions
- Clear indication of successful joint application
- 12 user IDs can be downloaded to the tool and results can be stored against individual users
- 20 unique stand-alone targets plus 20 unique work group targets for each work group
- 'Safe to start' button ensures hands are safely positioned at start up
- Quiet with noise levels that do not exceed 79.1dB(A)
- Non-impacting with vibration that do not exceed 2.5m/s<sup>2</sup>

## TORQUE CONTROLLER SYSTEM GLOBAL 400 SERIES

**Utilise connected wireless tooling to error-proof your processes**

The Global 400 is designed to organise workstations where highly customised products are assembled. It can work with 16 primary torque tools, 8 holding tools and an additional 8 I/O tools. It has the capacity for 100 sets of parameters that can be grouped allowing 4 operators to work as a team. These parameters or groups can be formed into jobs containing a fixed build sequence of up to 35 steps. Error-proofs your processes using connected wireless tooling.

- Supports up to 16 Sturtevant Richmond tools as well as the Norbar EvoTorque® Battery Tool
- Works with many protocols and MES systems (EitherNet IP, Open Protocol, Toolsnet, 24 Volt I/O)
- Supports the use of barcode scanners to further error proof your process
- Has the capability for 100 sets of parameters
- 10 pin I/O connector providing discreet I/O capabilities

**System Capabilities:**

- 6 inch diagonal, back-lit colour LCD display
- USB-A connector for use with barcode scanner, or updating firmware and saving files
- RS-232 D-Sub9 Connector for use with serial barcode scanner or serial printer
- Key switch for programming access, 21 function keys for programming
- Adjustable and programmable beeper for audio communication

## MULTI-PORT TORQUE CONTROLLER SYSTEM GLOBAL 400MP SERIES

**Designed to organise multiple workstations where highly customised products are assembled**

The Global 400mp distributes all the power, flexibility, ease and capabilities of the Global 400 over 4 individual network interfaces. The result? Up to 4 operators can work independently and don't even have to be in the same work cell.

4 separate network interfaces and Global 400mp architecture eliminate the need for groups in order to support simultaneous work.

Parameters are formed directly into jobs. With 4 network interfaces each operator can work on their own job, independent of the other operators.

The Global 400mp can be applied to assembly, repair and maintenance operations.

- Has the ability to work with 4 different stations/operators simultaneously through multiple ports
- Supports up to 16 Sturtevant Richmond tools as well as the Norbar EvoTorque® Battery Tool
- Works with many protocols and MES systems (EitherNet IP, Open Protocol, Toolsnet, 24 Volt I/O)
- Supports the use of barcode scanners to further error proof your process
- Has the capability for 100 sets of parameters
- 10 pin I/O connector providing discreet I/O capabilities
